

Internship (see Module-Handbook)

One internship which includes a workload of 120 hours is allowed to acquire (4) cp and a grade in "elective advanced lectures" of Master Physik or Master Astrophysik.

More than one internship can be done, also of reduced workload, but will not be relevant for cp and grade.

To add the internship to "elective advanced lectures", it must be registered as physics799 or astro831 prior to begin. The registration is open throughout the semester.
