

Research Project

see Module-Handbook: physics799 (Master of Science Physik)
astro831 (Master of Science Astrophysik)

One research project which includes a workload of 120 hours is allowed to acquire 4 cp and a grade in "elective advanced lectures".

More than one research project can be done, also of reduced workload, but will not be relevant for credit points and grade.

To add the research project to "elective advanced lectures", it must be registered as physics799 or astro831 prior to begin. The registration is open throughout the semester.
